DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCardle (WO 01/25365).

McCardle discloses an anticaking composition containing a protein, a saccharide, an alkali or earth metal and an acid (page 9, lines 1-18). Claim 1 differs from the reference in whether an octahedral mixed chloride is formed. However, since the composition is the same it is seen that an octahedral mixed chloride is formed. Therefore, it would have been obvious to make an octahedral mixed chloride as claimed.

Claims 2 and 4 further requires carbohydrates. Saccharides are contained in the definition of carbohydrates (page 5, lines 1-18).

Polysaccharides as in claim 3 with some the phosphate, phosphino groups or sulfate groups are disclosed on page 5, lines 9-19.

Claim 5 further requires the use of transition metal of iron and or chromium.

McCardle discloses that alkali and alkaline earth metal salts may be used. Nothing new is seen in particularly using iron or chromium absent a showing of unexpected results.

Therefore, it would have been obvious to use other metals, which can form salts.

Art Unit: 1761

Claim 6 requires that the salt is predonminantly sodium chloride. McCardle discloses the use of salt and the anticaking composition in amounts of 100 pmm of the salt (page 17, claim 24, lines 32-38).

Claim 8 requires spraying the anticaking composition onto the salt. The reference discloses spray treating chemical rock salt (page 12, lines 14-15).

Claim 9 further requires using the claimed non-caking agent as a road salt, claim 10, as a table salt and claim 11, in an electrolysis process salt. As the composition is to a non-caking salt composition combined with salt, it would have been obvious to use a non-caking composition in any process where salt is a used for the function of non-caking.

Allowable Subject Matter

Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen F. Pratt whose telephone number is 571-272-1404. The examiner can normally be reached on Monday to Friday from 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Milton Cano, can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
